# Metallic Salts

Metal salts are widely used in various industrial fields such as catalysis, electronics, optics, plating and so on. High-purity metal compounds are also valuable as materials for advanced ceramics with excellent electrical, magnetic, optical, mechanical, and thermal properties. Furthermore, inorganic materials like metal salts are applied in hybrid combinations with plastics, fibers, and other materials, serving as coatings, reinforcing agents, and fillers for plastics. In the following catalog, you can find our extensive selection of chemical reagents for metal salts, comprising several hundred different varieties. If you are also interested in large quantities exceeding the size of reagent packages, so please feel free to inquire with us.
